

# Jayant Shivankar

Software Engineer | Full Stack Developer  
[jayantshivankar4@gmail.com](mailto:jayantshivankar4@gmail.com) | [GitHub](#) | [LinkedIn](#) | [LeetCode](#)

## SUMMARY

Software Engineer and Full Stack Developer with hands-on experience building and deploying web applications using React.js, Node.js, Express.js, and MongoDB. Experienced in designing REST APIs, implementing authentication and CRUD workflows, integrating real-time communication with Socket.IO and WebRTC, and connecting third-party APIs. Strong foundation in Data Structures and Algorithms, Object-Oriented Programming, DBMS, and Operating Systems, with programming experience in C++, JavaScript, and TypeScript. Focused on writing maintainable code, understanding backend systems, and building reliable user-facing applications.

## TECHNICAL SKILLS

**Languages:** C++, JavaScript, TypeScript, SQL

**Frontend:** React.js, HTML5, CSS3, Bootstrap, Tailwind CSS

**Backend:** Node.js, Express.js, REST APIs, EJS

**Databases:** MongoDB, MySQL

**Real-Time & APIs:** Socket.IO, WebRTC, OpenAI API

**Core CS:** Data Structures & Algorithms, DBMS, OOP, Operating Systems

**Tools & Platform:** Git, GitHub, Docker, MongoDB Atlas, Render

## PROJECTS

**OpenAI Powered Chat Application** · React.js · Node.js · Express.js · MongoDB · OpenAI API July 2026 – Present

- Built a full-stack AI chat application using React.js, Node.js, Express.js, MongoDB, and the OpenAI API with persistent conversation history.
- Designed REST APIs for processing user prompts, AI-generated responses, and chat-history persistence through MongoDB.
- Integrated the OpenAI API through the Express.js backend, keeping API credentials server-side and separating AI request handling from the React frontend.
- Structured React components, Express.js routes, and backend middleware into modular services to improve maintainability and support future feature expansion.

**Pluto-Meet** · React.js · Node.js · Express.js · WebRTC · Socket.io · MongoDB [GitHub](#) | [Live Demo](#)

- Built a real-time video conferencing platform using WebRTC for peer-to-peer audio/video communication and Socket.IO for signaling.
- Implemented WebRTC connection setup with Socket.IO-relayed SDP offers/answers and ICE candidate exchange to establish peer connections.
- Implemented session-based user authentication with Bcrypt password hashing and secure token generation for protected user sessions.
- Developed a responsive React meeting interface with video grid and chat functionality, integrating real-time client-server communication for multi-user meetings.

**ForgeFlow** · React.js · Node.js · Express.js · MongoDB · Socket.io · JWT [GitHub](#) | [Live Demo](#)

- Developed a full-stack Git-based collaboration platform with JWT authentication, protected routes, repository management, issue tracking, and user profile modules.
- Designed RESTful APIs with Express.js and MongoDB Atlas, implementing CRUD workflows for users, repositories, files, and issues with persistent data storage.
- Integrated Socket.IO for real-time client-server communication between the React frontend and Express.js backend.
- Deployed the application on Render with MongoDB Atlas and production environment variables, resolving CORS and API integration issues during deployment.

## CERTIFICATIONS

- Full Stack Web Development (MERN) · Apna College
- Data Structures & Algorithms (C++) · Apna College
- Introduction to Artificial Intelligence · IBM SkillsBuild

## EDUCATION

B.Tech in Electrical Engineering · Yeshwantrao Chavan College of Engineering, Nagpur

2021 – 2025
